From Climate to Economics and Back: Mitigation and Adaptation Options for California and the Western States

In June 2004, the California Energy Commission held the first Annual Climate Change Conference, "From Climate to Economics: Anticipating Impacts of Climate Change in California." The conference was a forum for learning about State-specific impacts from climate change and mitigation strategies. It facilitated a lively discussion with world-experts on cutting-edge climate change science.

Based on the first year's success, the Energy Commission and CalEPA are pleased to present the Second Annual Climate Change Research Conference, in conjunction with the First Scientific Conference West Coast Governors' Global Warming Initiative.

The 2005 conference presentations are tailored to facilitate an interdisciplinary information exchange—a proven approach for conveying technical information to policy makers, managers, and the general public.

G • O • A • L • S

- Present the latest research results obtained by the Energy Commission-sponsored research through its California Climate Change Center.
- Provide a forum for individuals interested in regional climate change issues and on-going research in California, Oregon, and Washington.
- Facilitate cross-disciplinary discussion of key climate change research and issues, to help target scientifically and economically sustainable solutions.
- Provide an opportunity for networking and collaboration among institutions to address regional climate change issues on the West Coast and internationally.

California is pleased to have Sir David King, the United Kingdom Chief Scientific Advisor, as the keynote speaker.
